

How Much Does it Cost?

Our treatment is separate and apart from the care provided by a facility and the treatments provided in the rehabilitation department by physical or occupational therapy.

Our clinicians bill as Medicare Part B providers with no charge to a facility or the resident. Our doctors will become credentialed clinicians on staff at your facility.

Treatments provided are offered in conjunction with a resident's care plan. Ordered by a resident's attending physician as they would any other consulting treatment after determining that the resident's care plan would be facilitated.

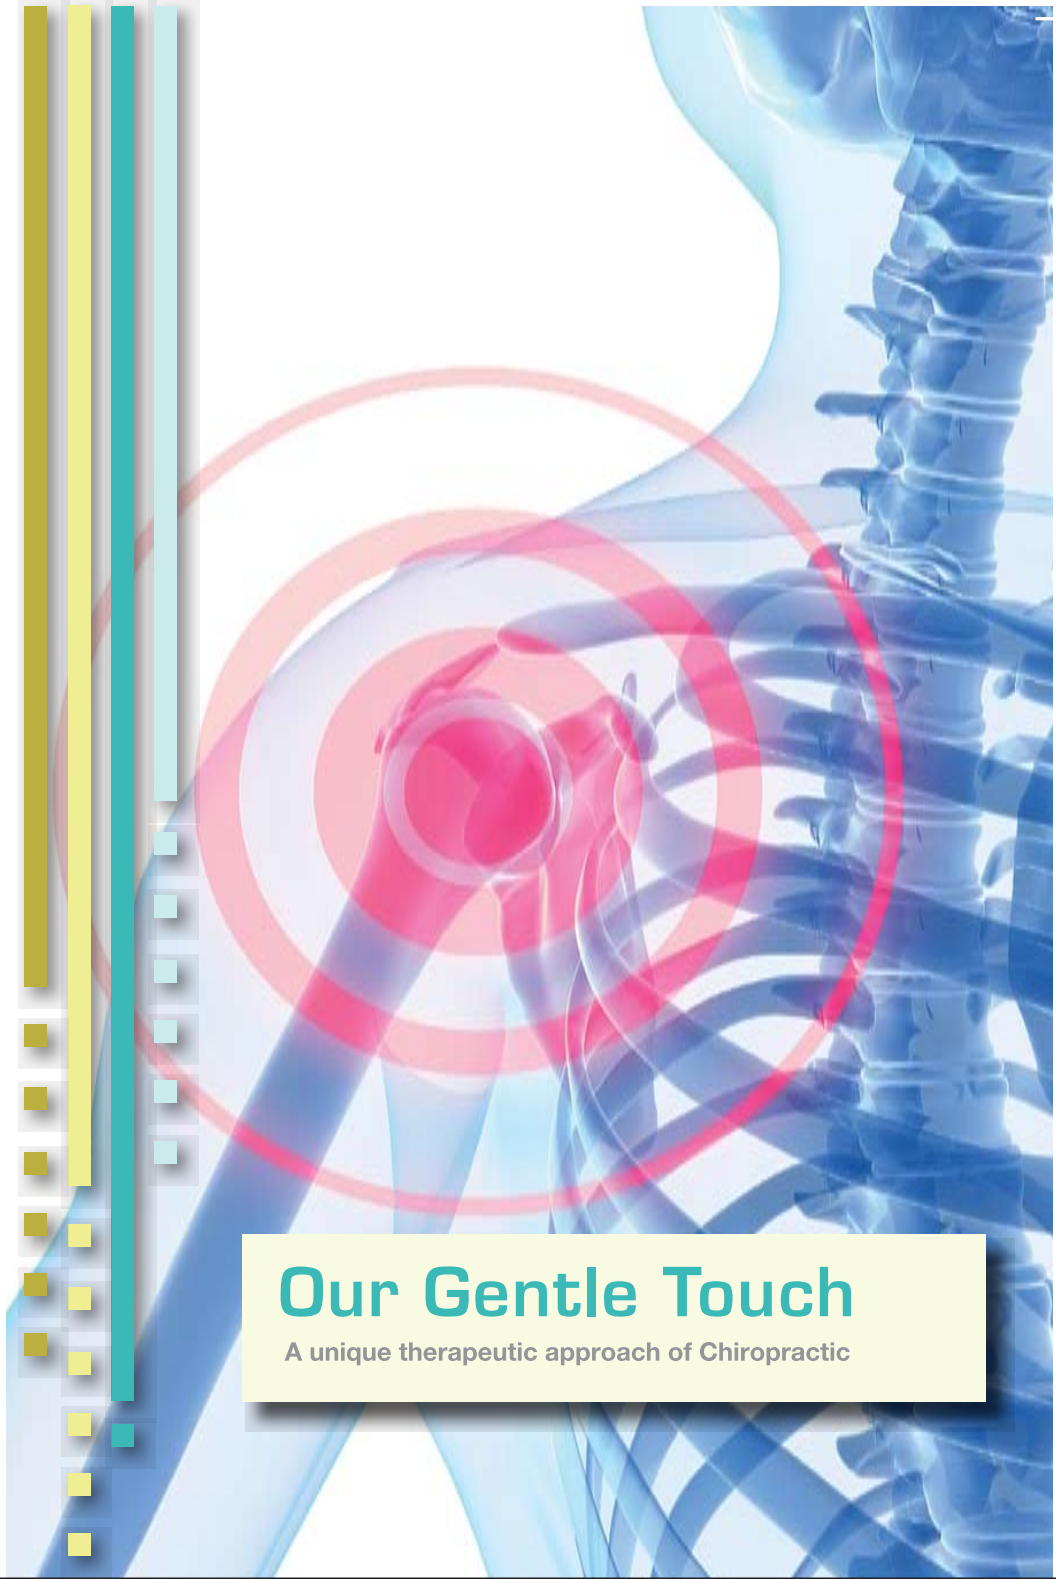

Our Gentle Touch

A unique therapeutic approach of Chiropractic

Our Gentle Touch

A unique therapeutic approach of Chiropractic

Our Gentle Touch:

Benefits to your residents and the care your facility provides

“It is gratifying to know that you provide the care and compassion that our residents need and deserve.” - Arthur A. Gianelli,
President and CEO, Nassau Health Care Corporation, Nassau University Medical Center

With no expenditure to your facility, we can provide priceless benefits that will assist your organization to:

- Be compliant with F-309, Quality of Care and Pain Management
- Improve Survey Outcomes:
Surveyors at facilities where we provide services have had positive feedback during the survey process.
- Provide a Positive Modality for Care Planning:
We provide a non-pharmacologic intervention that you can use in your care planning process and completion of the resident's MDS.
- Care for your Residents
- Enhance Quality of Life
- Create Resident and Family Satisfaction
- Save staff time:
Our treatments can assist with decreasing a resident's anxiety and agitation, which may decrease time staff needs to care for a resident.
- Compliment your palliative care program.

Proven Treatments for your Residents

In a skilled nursing facility, residents may spend a great part of their day sitting in wheelchairs, walking with walkers, or on prolonged bed rest. In these positions, shoulders become rounded or hunched over, chests become caved-in, and necks are flexed forward. Musculoskeletal pain, myofascitis, a decrease in cardiac and respiratory function, diminished circulation, constipation, headaches and other negative health processes can occur.

Additionally, all people need a human touch. Much of the touch provided in a facility is through patient care functions. Our treatments will provide your residents with a positive touch that has been clinically proven to provide extensive health benefits.

Treatments provided are not traditional chiropractic technique, but a combination of care including modalities tailored to each resident's needs. We provide age-appropriate care including gentle chiropractic joint mobilization technique, soft tissue massage, gentle stretching, trigger and pressure points to offer symptom relief, comfort and relaxation. Our treatments compliment the care provided by your rehab team in restoring lost mobility.

Provided weekly, we offer Non-Pharmacological Interventions to:

- Pain Management
- Increase circulation
- Reduce swelling
- Decrease in back pain, neck stiffness and headaches
- Decrease depression, anxiety and agitation
- Decrease fall risk
- Decrease muscle tension
- Improve duration and quality of sleep
- Dementia: Decrease anxiety and agitation in residents with Dementia
- Short-Term Residents: Care that may facilitate recovery. Treatment is based upon peer reviewed medical literature for TKA, THA, Respiratory Conditions, Falls, Amputation
- Long-Term Residents: Care on a continuous basis that the resident looks forward to, enhances their quality of life, and offers a familiar face, a gentle touch, and immeasurable health benefits.

“Vinnie’s increased ability to reach, turn his neck, lift his arms, and all-over strength are a testament to Dr. Albert and the need for this treatment in extended care facilities.” – Sandra D.,
Wife of a long-term care ventilator resident
